MACROS & MARKS

q a ... q Record a macro into register a

@ a @@ Play it · replay the last one

10@a Play it 10 times

m a ' a Set mark a · jump back to it

LazyVim / on this PC

FILES & SEARCH

- Spc Spc** Find a file in the project
- Spc /** Search text in all project files
- Spc e** File explorer (toggle)
- Spc f r** Recent files
- Spc ,** Pick an open buffer
- H L** Previous / next buffer (tab)
- Spc b d** Close the current buffer
- Spc s k** Search keymaps
- Spc s h** Search help pages

In the explorer: **a** new file (end with **/** for a folder) · **r** rename · **d** delete · **?** help

CODE INTELLIGENCE

- gd gr** Go to definition / list references
- gI gy** Go to implementation / type definition
- K** Documentation popup
- Spc c a** Code actions / quick fix
- Spc c r** Rename symbol everywhere
- Spc c f** Format (also runs on save)
-]d [d** Next / previous diagnostic
-]e [e** Next / previous error only
- Spc c d** Show this line's diagnostics
- Spc x x** Problems list (Trouble)

COMPLETION POPUP

- Ctrl+n Ctrl+p** Next / previous suggestion
- Enter** Accept
- Ctrl+Space** Open the menu
- Ctrl+e** Close the menu

WINDOWS, TERMINAL, GIT

- Spc | Spc -** Split side by side / top and bottom
- Ctrl+h/j/k/l** Move between windows
- Ctrl+↑↓↔** Resize the window
- Spc w d** Close the window
- Ctrl+/ **Toggle the built-in terminal****
- Spc g g** lazygit (stage, commit, push)
-]h [h** Next / previous changed hunk
- Spc g b** Blame this line

TOGGLES

- Spc u w** Line wrap
- Spc u L** Relative line numbers
- Spc u f** Format on save
- Spc u C** Pick a colour scheme (preview)

Press **Spc** and wait: a menu lists every shortcut
Open a project: `cd project && nvim .`

JUPYTER NOTEBOOKS (YOUR SETUP)

`nvim file.ipynb` opens as Python; cells start with `# %%`

- \ m i** Start a kernel (do this first)
- \ r c** Run the current cell
- \ r l** Run the current line
- \ r** (Visual) Run the selection
- \ r r** Re-run the cell
- \ r o h d** Output: open · hide · delete

With a kernel running, `:w` saves outputs into the `.ipynb`.

LANGUAGES READY TO GO

Python · TypeScript / JavaScript / React · Tailwind · HTML (emmet) · JSON · Markdown · Docker · Lua — with Prettier, ESLint and Ruff.

MAINTENANCE

- Spc l** :Lazy plugins — **S** updates all
- Spc c m** :Mason language servers & tools
- :LazyExtras** Add a language — **x** to enable
- :checkhealth** Diagnose setup problems
- :LazyHealth** ...LazyVim specifically

YOUR CONFIG `~/.config/nvim/lua/`

`config/options.lua` Settings

`config/keymaps.lua` Your own shortcuts

`plugins/*.lua` Add or tweak plugins

Example mapping: `vim.keymap.set("n", "<leader>h", "<cmd>noh<cr>")`
